

SmarterAccess
TECHNOLOGIES

Press Release

For immediate release:

October 3, 2008

Smarter Access Technologies, introduced its family of U2Boards products at the American Society of Industrial Security, ASIS show in Atlanta, Georgia September 15 – 17, 2008.

“Prior to the show, we received very good feedback on product direction, design and functionality. At the show, the validity and need for the products were confirmed by hundreds of visitors from major manufacturers, to integrators, consultants and end users,” said John Nemerofsky, partner Smarter Access Technologies.

“As manufacturers, integrators and end users saw how easy it is to install the product, and that we had a 72 door system installed in less than half a 19” rack, they were very impressed,” said Isac Tabib partner Smarter Access Technologies, “Based on the feedback we received, we are moving forward quickly for release of next generation products early in 2009.”

Smarter Access Technologies released its U2Boards family of products consisting of its Universal Intelligent Processor (UIP), Universal Intelligent Controller (UIC), two door Power over Ethernet controller (2PoE), Universal input and output board (UIO) and its Universal Smart Power Supply (USPS). All products are data center compliant, feature rich, and network intelligent with remote diagnostics and programming.

Patents pending.

Smarter Access Technologies, LLC, develops technology forward products for license to manufacturers in the security industry. Please visit us at www.smarteraccesstechnologies.com or contact us at sales@SATech1.com, or 866 266-6260.
